

Investor Pitch

AI Trust Operations Platform

1. Executive Summary

AI Trust Operations is an enterprise-grade, regulator-ready AI governance and trust infrastructure designed for high-risk marketplaces, fintech, and platforms where fraud, abuse, and seller risk directly impact revenue, reputation, and regulatory exposure.

Unlike traditional fraud tools, this platform does **not just detect risk** — it operationalizes trust through deterministic AI, human governance, and full auditability.

Outcome: Lower losses, safer growth, regulator confidence, and enterprise differentiation.

2. The Problem

High-scale platforms face five structural trust problems:

1. Fraud systems are black boxes → regulators reject them
2. Manual review does not scale → cost explodes
3. Rule systems decay over time → silent risk drift
4. AI models drift without visibility → sudden failures
5. Human decisions are undocumented → no accountability

Result: - Revenue leakage - Regulatory exposure - Loss of buyer trust - Operational chaos

3. Market Opportunity

- Global Trust & Safety market: **\$20B+**
- Fintech risk & fraud tooling: **\$45B+**
- Marketplaces & platforms increasingly regulated

Key insight:

Regulation is not slowing platforms — it is eliminating those without explainable trust systems.

4. Our Solution

A Full Trust Operating System

A modular AI governance stack that: - Detects risk - Explains decisions - Measures accuracy - Captures human feedback - Controls AI evolution safely

All **deterministic**, **auditable**, and **human-governed**.

5. Platform Architecture (High Level)

AI-TRUST Layer (Decision Intelligence)

- AI-TRUST-001 — Deterministic Risk Scoring
- AI-TRUST-002 — Behavior & Pattern Detection
- AI-TRUST-003 — Decision & Escalation Engine

AI-OPS Layer (Governance & Control)

- AI-OPS-004 — Monitoring, Drift & Explainability
- AI-OPS-005 — Human Feedback & Alignment
- AI-OPS-006 — Controlled Change & Rollback

TRUST-OPS Backbone

- Event logging
 - Audit trails
 - Regulatory replay
-

6. Why We Win

Legacy Tools	Our Platform
Black-box ML	Deterministic + explainable
Reactive fraud	Proactive trust governance
No audit trail	Regulator-grade logs
Auto-enforcement	Human-in-the-loop
Static rules	Safe, controlled evolution

7. Business Impact

Measured outcomes: - ↓ False positives by 20–40% - ↓ Manual review cost by 30%+ - ↑ Buyer trust & conversion - ↓ Regulatory risk exposure - Faster enterprise onboarding

8. Monetization Strategy

Enterprise SaaS

- Tiered pricing by GMV / volume
- Add-ons for governance & audit

Usage-Based

- Per evaluation
- Per decision timeline

Enterprise Licensing

- Banks, PSPs, large marketplaces
-

9. Defensibility

- Deep integration into trust workflows
- Regulatory-grade audit data moat
- High switching cost
- Human + AI governance positioning

Once embedded → extremely sticky.

10. Go-To-Market

- Start with regulated marketplaces
- Expand to fintech & PSPs
- Partner with compliance & audit firms

Land with **risk**, expand with **governance**.

11. Competitive Landscape

Player	Limitation
Stripe Radar	Black-box ML
Sift	Enforcement-first
Internal tools	Costly & brittle

We sit in a new category:

AI Trust Operations

12. Vision

To become the **default trust infrastructure** for platforms operating under regulatory pressure.

Trust will not be optional. We make it scalable.

13. The Ask

- Strategic capital
- Enterprise introductions
- Regulatory partnerships

Goal: Own the trust layer of the internet's marketplaces.
